# Webkeys

## Description

Webkeys is a web application that allows you to easily manage access using a numeric code. Its intuitive navigation allows you to quickly manage guest codes as well as employee codes, whether it's creating, deleting, or modifying code validity.

Access codes created by Webkeys work in real time with separate Oracode 660 locks or Oracode 660M readers installed for access to rooms, common areas such as car parks or entrance halls.

Webkeys also offers the ability to obtain audits from locks and audits of work operations in the application.

## Benefits

- Internet browser connection, so there is no need to install a user workstation
- Intuitive use for code management, but also for creating reports
- Suitable for screen (computer, tablet, smartphone)
- Allows management of multiple buildings
- It is possible to create different user profiles
